

## Market-leading and future-proof solution for IPR, PSD3, & PSR Compliance

**Your Problem:** Regulations come and go - what remains is the obligation to keep business processes and systems compliant within the set deadlines. Depending on the complexity of the new regulation, this process requires enormous financial and time resources on the part of the banks and financial institutions.

**Our Solution:** The PS-Star solution from Qwist supports the most established Berlin Group standard as well as all the regulatory requirements of the EBA. It covers existing regulations like PSD2 or IPR as well as the upcoming ones: PSD3 and PSR. It can be modularly configured and extended for the future requirements of Open Banking

**>99.9%**

Availability for our hosted SaaS solution

**250+**

Active TPPs/banks accessing the APIs

**40 days**

Duration of integration (for a standard setup)

### Benefits

**Reduced costs**

through an all-in-one solution that covers the regulatory requirements for Open Banking and allows for fallback exemption (proven) - at a fixed price.

**Fast implementation**

in 40 days for the sandbox, and afterwards in few weeks through predefined interfaces.

**Expandable solution**

with an integrated API platform and pre-defined use cases for Open Banking and Open Finance.

**Efficient operation**

as Software as a service (SaaS) or optionally on-premises.

### Why Qwist?

**Proven record**

of making clients PSD2-compliant successfully (incl. fallback exemption), offering the same quality for IPR, PSD3 and PSR.

**Member of Berlin Group**

**Advisory Board**

continuous participation in PSD2 and PSD3/PSR related workshops, events.

**High-availability hosting**

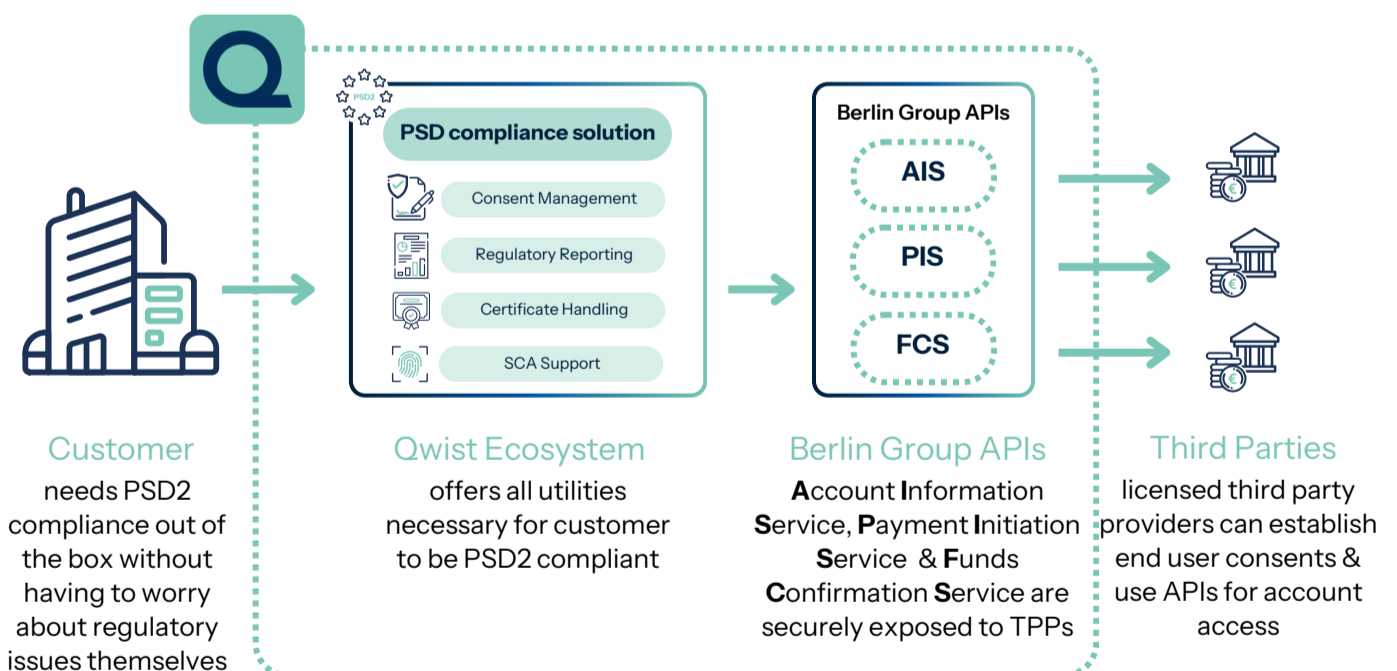

in DE bank data centers.

**Market-leading PSD2 provider in Europe**

## How it works

Flexible and extendable SaaS solution for compliance with all existing and upcoming regulatory requirements

## Our complementary products

### API Platform

It provides a secure framework for API-Management, metrics, and tooling covering the complete API lifecycle, from development over transformation and security to backend connection. The platform is expandable with additional open banking use cases.

### API Consent Management

Enabling financial institutions to expose Open Finance APIs and solving the high-security demands, standardization requirements, and adoption hurdles. The product is use-case-agnostic and supports typical API-based Open Finance use cases.
